

BRIEF SUMMARY

I am currently studying for my Master's in Computer Applications (MCA), and my background is in mathematics. While I find some aspects of the program engaging, I'm also facing challenges. The transition from math to computer science involves learning new programming languages and technical concepts, which can be difficult at times. Managing my coursework and projects alongside my personal life requires careful time management.

I'm also trying to stay current with new technologies in the rapidly evolving field of computer science, which is both exciting and challenging. I enjoy the opportunity to apply my math skills to problem-solving, but practical experience and coding practice are areas where I'm putting in extra effort.

Overall, I'm optimistic about my progress and grateful for the learning opportunities. I'm seeking support and advice from my professors and peers when needed, and I'm participating in projects to gain hands-on experience. It's been a journey of growth, and I'm committed to achieving my goals"
